AZ GRUPPE

LEADING SOLUTIONS TO
FINAL RESOLUTION

A close-up photograph of several heat exchanger tubes made of corrugated stainless steel tubing, arranged in a grid pattern. The tubes are supported by a metal frame. The background is dark, and the lighting highlights the metallic texture of the corrugated tubes.

Heat Exchangers

made of corrugated stainless steel tubing

Exchanging Heat – Making the Most of Energy

Heat Exchangers made of flexible stainless steel tubing

▼ AZ heat exchangers are used in industrial and applications in the building utilities management (HVACR), e.g. stratified storages, refrigeration or water-bearing woodstoves.

They meet any requirements for applications in drinking and tap water cycles.

Advantages

Corrugated tubing and hoses from our own production are used for the heat exchangers. Based on its corrugated structure, the tubing achieves a turbulent flow even from smallest flow speeds, thus transferring a maximum of energy.

By combining the turbulent flow with the elasticity of the corrugated pipe, calcination of the storage system is prevented resp. minimized.

Our corrugated tubes and hoses provide a thermal efficiency rate exceeding that of traditional plain tubes by up to 50%.

The multitude of applications for our corrugated stainless steel tubing ensures that your heat exchanger is optimally integrated into your system requirements.

Types of Storage Inserts

- 1 Storage insert with plastic support system**
 - light
 - sturdy
 - hydrolysis-resistant (long-term stability/high durability)
- 2 Storage insert with stainless steel clip support system**
 - for universal use
 - in small quantities
- 3 Storage insert with stainless steel wire reinforcement**
 - optimized for cost-efficiency
 - light
 - sturdy
- 4 Storage system with stainless steel frame**
 - sturdy
 - for large quantities
- 5 Heat exchangers without support system**
 - self-supporting
 - economic

Development

► We do not want to be considered a supplier of metal hoses and corrugated stainless steel tubing. We would rather be your business partner providing an all-in-one-solution for your requirements. For that reason, we design the heat exchangers tailored to your special requirements, customized to the shape of the piping design and with a support system suitable for any structural conditions and requirements you may have.

Connection

► When linking tubing to the respective connections, state-of-the-art welding and soldering processes are used. We will optimize the connections to suit your individual requirements – to be inserted into plastic, steel or stainless steel containers.

Welding processes

- manual and semi-manual TIG welding, such as orbital welding etc.

Soldering procedures

- autogenous and induction soldering processes, mainly brazing

Performance

► When using our corrugated tubing, a small additional storage may be designed when still running at the same capacity. Or, if storage capacity remains the same, a higher heat rate is generated. When AZ corrugated tubes are used, the efficiency rate will exceed that of traditional smooth tubes by up to 50% (depending on the respective conditions of application).

Compact Heat Exchanger with especially space-saving and efficient design (cross section model).

Technical Data

| Nominal widths | DN 08 | DN 10 | DN 12 | DN 16 | DN 18 | DN 20 | DN 23 | DN 25 | DN 32 | DN 40 | DN 50 |
|---|---|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| Nominal lengths | Standard up to 100 m (longer tubing available upon request) | | | | | | | | | | |
| Operating pressure* | | | | | | | | | | | |
| WSI 10 | 20 | 10 | 10 | 6 | – | 4 | – | 2,5 | 2,5 | 2,5 | 1,5 |
| WRO | 16 | 16 | 16 | 16 | 16 | 16 | 16 | 16 | 5 | 5 | 5 |
| Compressive strength/ crush resistance | 100,000 cycles min., acc. to the respective design pressure | | | | | | | | | | |
| Corrosion-resistance | acc. to materials 1.4404 / 1.4301 | | | | | | | | | | |

AZ Group

AZ Industrial Technology 2011

For reliably transporting a multitude of mediums from A to B, our group of companies is your ideal contact:

We offer suitable products for conducting, blocking and using gaseous, partly solid as well as fluid substances. In cooperation with our business partners from the pertinent industrial sector, we provide solutions for a large variety of challenges in piping technology.

Immediately after the company was founded in 1979, our customers indicated an enormous demand for individual, customized technical solutions. To be in a position to meet any corresponding request, we installed our own R & D department for the piping technology division. From the very beginning, this business unit has developed into the absolute core area of our activities..

► Our key target is a long-term and permanent cooperation.

AZ cats® Flexible Tube System

Our cats® flexible tube system is suitable for internal and external installations for gaseous and fluid mediums. On account of its thinner walls and thus larger exchange surface, cats® flexible stainless steel tubing is optimally suitable for the manufacture of heat exchangers. Bending the cats® flexible tubes into the shape of the heat exchanger is easier and faster than compared to bending standard pipes: Our material meets highest requirements as regards corrosion-resistance and durability.

AZ Flexible Hose

In addition to flexible tubing, we also provide flexible stainless steel hoses. The difference between our AZ flexible tubing and the AZ flexible hose is a tighter and steeper wave geometry of the hose, its thinner resp. thicker wall thickness (type WS 110 resp. WS310) and high reverberating properties. Upon request, we will optimize the flexible hose used for its individual application. At this point in time, we offer two standard types for heat exchanger applications: WS 110 and WS 310.

Flexible hose, no braiding

WS 110

Flexible hose with a larger wall thickness

WS 310
